CASHMERE CARE GUIDE

WASHING

- Before washing, close any buttons and turn your knit inside out
- Use our [FTC® liquid Cashmere detergent](#) or any liquid mild detergent
- Washing machine: Cold wool wash cycle
- Spin max. 400 rpm

Info: Wash knits only when necessary. Airing helps to remove any odours. Wash our Cashmere in the washing machine as indicated to maintain the quality of your knitwear.

DRYING

- Always air dry your knits
- Lay knitwear flat on drying rack to air dry at room temperature
- Attention: Avoid direct sunlight

STEAMING

- Steam your Cashmere styles every now and then
- Steam revitalises Cashmere and restores the natural moisture of the material
- The heat of the steam kills bacteria and prevents moth infestation

PILLING

- Carefully remove pilling nodules with the [FTC® Pilling Comb](#)
- Place knitwear on a flat surface and comb carefully in knit direction

Info: Pilling is a natural characteristic of knitwear. The pilling is caused by the friction of the fine fibres and is not a quality defect.

STORING

- Knits should be stored lying flat, not hanging
- Protection from moths: use moth paper (natural, without toxins), lavender bags or lavender soap
- For longer storage: place your knitwear in a cloth bag for protection
